

Fleet Management Solutions

Energy • Exploration & Production • HSE

Health, Safety, and Environment

GPS-based vehicle and worker tracking are an essential tool for HSE programs in the energy industry. Significant human welfare and financial benefits are achieved with very low cost per asset.

FMS takes you beyond simple tracking by providing the information you need to improve the safety, productivity, and profitability of your fleet.

FMS provides in-vehicle hardware, satellite communication services, and support for a complete solution.

The Iridium network of satellites insures global availability and near real-time communication of data between field teams and headquarters.

◀ Worker Safety

Location and activity awareness can save lives. Two-way communication supports lone worker programs and reduces the impact of accidents in the field.

◀ Driver Behavior

Reduced speeding and prevention of unauthorized use improves policy compliance. Awareness and accountability support program enforcement.

◀ Operations Security

With the threat of theft and vehicle hijacking, FMS push-button emergency messaging can make the difference. Tracking increases vehicle recovery and lowers costs.

◀ Environmental Impact

Reduced speed and idling improves fleet efficiency and lowers fuel costs and emissions.

While the safety and security of vehicles and drivers are your top priority, you can also be assured of the rapid return on investment in FMS. Saving lives, preventing accidents, and providing security also reduce costs associated with incidents, liability, fuel, and operations. Many FMS clients see payback within one year.

FMS Technical Support & Professional Services

Client satisfaction, results and continuous return on investment begin with quality training and installation support.

FMS works closely with every client to ensure system installation and deployment is complete and on schedule.

With an online knowledge base and truly helpful documentation you may never encounter a problem you can't solve yourself. But if you do, FMS is just a phone call away.

FMS Exploration & Production Customer Results

Helmerich & Payne

Helmerich & Payne, Inc. operates in rugged and remote territory, but they still maintain contact with teams and know exact locations. This is important when they need to find the closest resource to an event or location for rapid response.

Global Geophysical Services

“Operator safety, efficient deployment of vehicles and asset tracking are key components of our health, safety, environment, and quality performance.”

—Vladimir Vanovac, Manager Worldwide Navigation and Survey

DCP

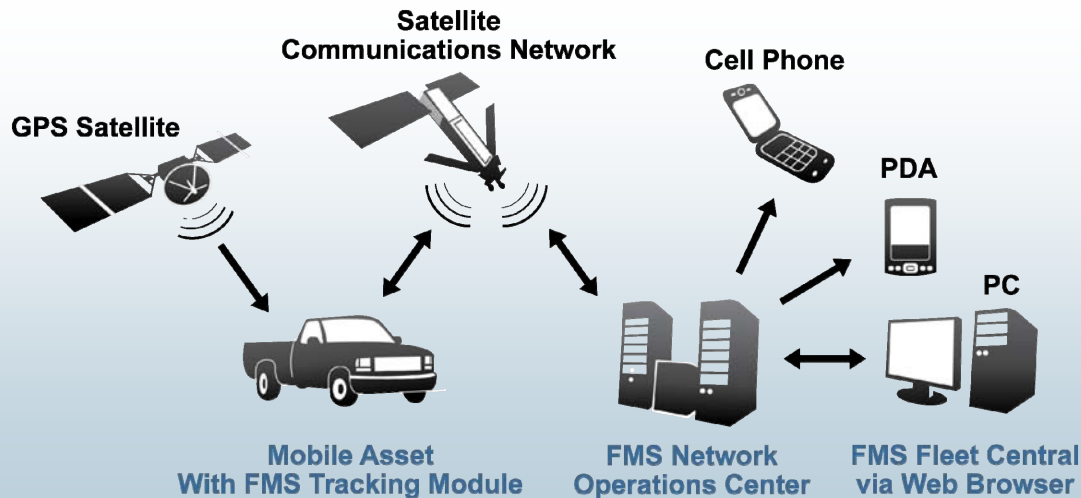

FMS technology has helped improve DCP Midstream driver habits by increasing behavior awareness. Positive behavior change has lowered the overall number of risk-taking events.

Petroproduccion

“FMS was the only entity operating in our region that could deliver all the features we needed to implement our efficiency and security programs.”

—Roland Mariach, Sr. Engineer for Infrastructure and Networking
